

Agricultural Calander – August

Agricultural Operations	
1.	The opportunity is suitable to conduct the process of solar sterilization of greenhouses if not applied already.
2.	Remove fallen fruits in order to avoid the spread of diseases and insect pests. Spray trees with an appropriate insecticide when infection appears, such as Pyrifil.
3.	Observe the emergence of the olive fruit worm, the fig scale insect & the pomegranate worm. It is of high importance to combat them by using the appropriate pesticide.
4.	Remove unwanted growths & cancers on trees in order to facilitate the access of light, air & spray solutions to inside of the tree.
5.	Equip greenhouses & inspect irrigation networks.
6.	Cultivation of cucumbers in greenhouses in Al-Shifa region.
7.	Maintain tree irrigation at a rate of 1 – 2 times per week.
8.	Focus on the fertilization program according to the crop & production stage.
9.	Apply a mulching procedure around the stems of Citrus Trees to prevent water from reaching them & to reduce the risk of gum disease.
10.	Cover Palm Trees with gauze to protect them from pests.
