

Agricultural Calander – September

Agricultural Operations	
1.	Producing vegetable seedlings such as cauliflower, cabbage, lettuce, and broccoli to be planted in the open fields later.
2.	Ventilating the greenhouses after conducting the solar sterilization process in the Valley areas, covering the greenhouses, ensuring that the drippers work efficiently, spreading the mulch and preparing the houses for cultivation.
3.	Removing the autumnal thrust growth that are infected with tunnel makers on citrus trees, and spraying with appropriate pesticides.
4.	Irrigate the orchards regularly and in sufficient quantities, especially for trees that bear a crop.
5.	Covering palm trees with gauze to protect them from pests.
6.	Pay attention to the fertilization program according to the crop and stage of production.
7.	Continuing to carry out mulching around the stems of citrus trees to prevent water from reaching them, in order to avoid gum infection.
