

## Agricultural Calander – October

<b>Agricultural Operations</b>	
1.	Preparing greenhouses in the Ghor region for early cultivation, and closing the entrances to the houses with white gauze.
2.	Carrying out the cultivation of October vegetables, such as: zucchini, peppers, radishes, carrots, spinach, and the cultivation of beans and peas after the middle of the month, with the necessity of moderation in irrigation at the beginning of cultivation.
3.	Cultivation of vegetable seedlings such as tomatoes, sweet and hot peppers, cucumbers, and strawberries inside greenhouses.
4.	It is expected that the Fall generations of insect pests will appear on the seedlings of newly planted vegetables, such as whiteflies, aphids, mites and worms, which requires the development of an integrated control program.
5.	Preparing to start harvesting citrus fruits and olive fruits, taking into account the purpose of the olive fruits (for raisin or oil).
6.	Cultivation of cut flowers in greenhouses, monitoring low temperatures, especially at night, and closing greenhouses to protect new plants.
7.	Starting soil preparation processes for planting wheat and barley crops.
8.	Pay attention to irrigation and fertilization according to the programs prepared for each crop.
9.	Start harvesting palm fruits in the valley areas.
