

## Agricultural Calander – November

<b>Agricultural Operations</b>	
1.	Preparing and plowing the land, adding slow-release fertilizers, Granufert 18-18-5, and cultivating field crops, especially wheat and barley.
2.	Cultivation of vegetables inside the greenhouses in the Jordan Valley for the late season, and closing the greenhouses during the night to preserve the heat.
3.	Open cultivation of seedlings of lettuce, cabbage, carrots, cauliflower, red cabbage, heads of onions and garlic.
4.	Monitoring the Mediterranean fly and tunnel makers on citrus, removing infected new growths and spraying with appropriate pesticides in severe cases.
5.	Paying attention to irrigation and fertilization according to the programs prepared for each crop.
6.	Continue harvesting citrus fruits and olives.
7.	After the completion of the olive and citrus harvest, trees are required to be pruned and sprayed with mineral oils and appropriate pesticides.
8.	Carrying out the Fall plowing of the houses after excavating them in the Al-Shifa areas.
9.	Start adding slow-release fertilizers Granufert 18-18-5 to trees, preferably mixing it with treated manure.
10.	Palm fruit picking continues until the tenth of this month.
