

Agricultural Calander – December

| Agricultural Operations | |
|--------------------------------|---|
| 1. | Cultivation of onions and garlic, and start planting potatoes in the central and southern Jordan Valley. |
| 2. | Cultivation of cucumbers and peppers in greenhouses, late cultivation in the Jordan Valley. |
| 3. | Taking care of the early stalk crops in the greenhouses in the Jordan Valley in terms of pruning and scaling, closing the greenhouses during the night and cold days to reduce heat loss, and paying attention not to increase irrigation to avoid the spread of rot. |
| 4. | Placing white gauze to close the doors and ventilation holes in greenhouses to prevent the entry of whiteflies and aphids. |
| 5. | Continue picking citrus fruits as well as olives for oil. After harvesting, trees must be pruned, broken and dry branches removed, and winter spraying with mineral oils, insecticides and fungicides. |
| 6. | Adding the slow soluble fertilizer Granufert 18-18-5 for trees, preferably mixing it with the treated organic manure. |
| 7. | Paying attention to irrigation and fertilization of the crops grown according to the fertilization program prepared for each crop. |
| 8. | The possibility of growing wheat and barley in the Jordan Valley. |
